

BigBags: D1

Provides an easy and efficient handling once filled and also during its intermediate storage stage and transport.

The **D1 Big-Bag** makes handling fast and efficient, once as well as during its storage and transport. D-1 bags are made out of **Polypropylene fabric (PP)** and may contain a **Polyethylene (PE)** liner inside. They are U.V. stabilized and can be recycled. Its biggest advantage is that it can be easily lifted from one or two points. Loading and unloading with fork-lift trucks can be carried out by a single person and the bags can be stacked up to 5 heights. A better use of space provides more storage availability at no additional cost.

Emptying is fast thanks to a single cut at the bottom with a sharp object, or with use of a discharge spout (optional). There are specific designed **D1** for cement, fertilisers, dangerous goods, etc.

Maximum Guarantee.

- Rigorous quality control.
- High safety factor.
- Maximum stability during storage due to its bottom design.
- Total flexibility at transport.
- U.V. stabilised.
- Resistant to chemical agents.

Significant cost saving.

- Easy filling and emptying.
- No pallet needed.
- Elimination of slings.
- Minimum labour required during its filling, handling, loading and unloading.
- Minimum investment in filling equipment.
- Possibility of outside storage
