

BigBags: D4 Q-Bag

It's an innovation that avoids the bag to bulge because of its inner structure that helps to maintain the square shape.

The **QBag** - preformed bag, baffle bag -, has PP straps sewn along along the inside part of the body corners so to maintain its square or rectangular shape once filled. This leads to optimising space during transport as well as improving stability. The use **QBag** increases up to a **25% more loaded** product on a same space.
