

DURAPOLS® AGRO 6X6

Mosquito Net / Anti Insects / Windbreak /17 Mesh

GrupoCondepols
Packaging Solutions & Wood Plastic Composite
& Agriculture Nets

Overview

It is an agrotexile frequently used in agriculture, light and highly versatile as a covering material of crop protection systems for fruit orchards (citrus), some types of Summer vegetables. Likewise it can be used as windbreak barriers.

Lately it is starting to be used in Western Europe to be displayed directly on open-field Summer crops with no need of frames.

It is becoming well used to cover crop protection systems for tropical fruits such as dragon fruit, avocado, mango as well as kiwi. All these crop protection systems provide a pleasant environment, reducing water consumption, so necessary for these crops: Moreover, it reduces fruit losses due to the windy conditions. At last it provides sun protection with darker colors (grey, white, green, black, etc.).

What else

High UV stability

Better environment for the plants

Light and easily installable

Windbreak protection

Lower evapotranspiration

Sunshade protection

Crossing pollinations

Organic Farming

Light diffusion

Tearing resistance.

Other details

This material is used as well as scaffolding net to cover building facades.

It can be used as a cost-effective tarpaulin for trailers with transport bulk construction materials or agroindustrial products such as cotton, cereals, tomatoes or olives.
